

5 Symptoms your RIA Shouldn't Ignore

January 24, 2017

Here at RightSize Solutions, our Chief Executive Officer, Wes Stillman, was having some ongoing shoulder pain. Like many of us do, he put off having it looked at, hoping it would go away. Now Wes might need surgery. The pain was actually something serious, and unfortunately, since Wes waited, the injury got worse.

We are telling you this because there are similarities in our own tech world. Your RIA is the body, and you might ignore daily aches and pains, hoping they're no big deal. Of course if something major happens—like your internet or email goes down—you'd pick up the phone and ask for help. But smaller issues get ignored and swept under the rug.

Like nagging shoulder pain, there are many symptoms within your RIA that should trigger a visit with your cybersecurity expert. These symptoms include:

1. your internet seems slow
2. logging in takes longer than usual
3. you're missing emails
4. there's a website you sometimes can't access
5. you got a rejected email from someone you email regularly

Like your health, you can choose to ignore these symptoms—but these “smaller” issues are often indicators of something worse. Don't wait until the symptoms get more serious and brings your business to a screeching halt!

Ready for a free tech assessment? Whether you're having a current tech concern or you're simply looking towards the future, we will discuss, review and assess your current technology (while you get to know us better). [Sign up here.](#)

P.S. Wes's shoulder will be okay. What about your RIA?
